

Dedicated to our valued customers and partners, existing and new alike, Source Technologies embraces the basic philosophy of delivering the best possible products and service available – without exception.

### About Us

Source Technologies is celebrating 25 years as a leader in the specialized print industry. Evolving from early aspirations of providing customized printers to a wide variety of businesses, the company has transitioned from a successful value-added distributor to an organization that manufactures its own products. Stemming from a strong engineering team, with centuries of combined experience, our commitment is to use the most advanced technology to turn inspired ideas into world-class solutions.

### Thermal Print Solutions

The most recent product line from Source Technologies is a new genre of thermal printing devices. Overall, the accomplishment provides the market with a vastly improved customer experience from out-of-box integration to media loading, calibration and management. With an initial offering inclusive of mid-range and mobile printers, organizations in the areas of healthcare, warehousing, transportation, manufacturing and retail will benefit from the ease-of-use and reliability of our thermal printers.

### Laser Printing Solutions

Our printing solutions also include magnetic ink character recognition (MICR) for the printing of checks and negotiable documents with unsurpassed security features. Secure document printers use the same high-level security for the printing of prescriptions and other time- and information-sensitive information without the use of MICR toner. Barcode and forms printers support a vast array of barcode symbologies and allow access to printer-based forms such as packing slips, shipping labels, invoices and order forms.

# Corporate History

---

Founded in 1986, Source Technologies began with a modest focus, to provide custom printing solutions for businesses. Initially, these printing solutions included custom interfaces, barcode solutions and virtually any special print technology needed to solve a particular customer challenge. Since then, our focus has expanded considerably to include an array of solutions designed to meet the needs of our ever-expanding customer base.

In the early 1990s, Source Technologies formed an alliance with Lexmark to become their exclusive provider of MICR laser printers. Since then, our team of engineers and software development specialists support a family of disbursement- automation software tightly integrated with our secure printers. These solutions offer a variety of performance levels and unsurpassed security for the most demanding environments. Solutions include MICR printing for negotiable documents and secure printing for time- and information-sensitive materials. We are proud to include amongst our customers nine out of the top 10 U.S. banks, thousands of retailers, government agencies and staffing and transportation companies.

Approaching the millennium—understanding the desire for new and innovative technology, and having gained years of real-world financial transaction experience—we developed some of the first self-service kiosks for managing customer-facing financial transactions. Today our PilotPoint family of intelligent kiosks and software allow financial institutions, retailers, and governments to modernize and automate many customer-facing operations, including retail bill payments and consumer banking. Source Technologies is a single source provider of this complete solution – hardware, software and components.

In 2008, we introduced our ServPoint family of interactive kiosks, featuring a modular design for flexible configuration, quick peripheral changes, and a powerful Windows® compatible processor that supports a broad range of applications. These next-generation kiosks were designed for flexible, high-performance point-of-interaction (PoI) applications in retail, government, healthcare, and other industries.

For 25 years, Source Technologies has enjoyed success because we listen to our customers and understand their desire to do business in the most inspired way possible. We combine this idealism with advanced technology and the ability to innovate with speed, rapidly bringing new ideas to fruition. We then deliver these solutions with world-class quality and dependability, providing our customers with ongoing economic value and significant competitive advantages.
